

BIO

Aanchal Jain is a technology executive with **20+ years of engineering leadership**. At **Block (Square)**, she boosted production-ready AI code generation by **40%** and managed 4 revenue products at **\$100M+ ARR**. At **Slack**, she defined product strategy for Slack Connect, including external user experiences and security policies. At **Quantcast**, she cut operational costs by **50%** by transforming legacy systems into self-service platforms. At **Razer**, she shipped **3 Android phones** and secured **3 patents** in mobile software innovation.

As a Fractional CTO, she brings depth to founders who need strategic technology leadership without the commitment of a full-time executive hire. Whether you're navigating your first technical hire or architecting for scale, she helps you make decisions with confidence.

She is especially passionate about helping companies leverage AI and modern tech stacks to create competitive advantages, turning technology from a cost center into a growth engine.

FRACTIONAL CTO · AI STRATEGY FOR GROWTH-STAGE STARTUPS

"Most fractional CTOs hand you a slide deck. I've shipped AI-driven products at \$100M+ ARR scale inside Block, Slack, and Quantcast, and I bring that operator's playbook to leaders who need an AI strategy the board will actually trust."

THE PROBLEMS I SOLVE

- ◆ **AI & Technology Strategy:** identify high-impact AI opportunities, build your roadmap, and position your tech stack for the next wave, not the last one.
- ◆ **Engineering Organization Design:** teams, hiring plans, and culture that attract top talent and ship reliably. From your first engineer to your fiftieth.
- ◆ **Architecture & Scalability:** review and redesign your platform to handle growth without accumulating the technical debt that slows you down later.
- ◆ **Technical Due Diligence:** for investors and boards, a thorough assessment of engineering quality, team capability, and technical risk before major decisions.
- ◆ **Interim CTO Leadership:** step in during transitions to keep engineering momentum, providing steady leadership while you search for your permanent technical leader.
- ◆ **Founder Technical Coaching:** one-on-one guidance for non-technical founders learning to evaluate, manage, and communicate with their engineering teams effectively.

QUESTIONS TO ASK ME

- ◆ What are the primary AI strategic priorities for the next six months?
- ◆ How do I measure AI productivity in my engineering org without resorting to theater metrics?
- ◆ Where is our token spend leaking, and how do we put real controls around it?
- ◆ How should I structure my engineering org to ship reliably from 5 to 50 engineers?
- ◆ When does it make sense to redesign our architecture vs. live with the technical debt for now?
